BOROUGH OF EAST RETFORD.

ANNUAL REPORT FOR 1941

BY

W. C. DAVIDSON, M.D., Ch.B., D.P.H.

Medical Officer of Health.

PUBLIC HEALTH DEPARTMENT,
YORKSHIRE PENNY BANK BUILDINGS,
MARKET PLACE,
RETFORD.

To the Mayor, Aldermen and Burgesses of the Borough of East Retford.

Gentlemen,

I have the honour to present to you the Annual Report on the health of the Borough during the year 1941. Owing to present conditions the report is brief and contains only an outline of the work done during the year. It has been compiled in accordance with the instructions issued by the Ministry of Health in their Circular 2614.

I have the honour to be, Gentlemen,

Your Obedient Servant,

W. CAMPBELL DAVIDSON,

Medical Officer of Health.

Statistics and Social Conditions of the Area.

| Area 4,65 | 7 acres. |
|---|----------|
| *Registrar-General's estimate of Resident | |
| Population mid-year 1940 | 15,900 |
| *Number of inhabited houses | 4,413 |
| Rateable Value (1st April, 1941) | £93,529 |
| Sum represented by a penny rate £3 | 68/14/8 |

*It has been considered inadvisable meantime to publish later figures.

Vital Statistics.

| LIVE BIRTHS— | Total | M | \mathbf{F} | |

Report of the Sanitary Inspector for 1941.

Health Department,
Retford.

To the Medical Officer of Health.

I have much pleasure in presenting to you my report on the work done during the year 1941.

53 complaints were received and the premises visited, nuisances being found in 51 cases.

101 informal notices asking for the abatement of nuisances were served, and in 11 cases these were followed up by statutory notices under the Public Health Acts. Owing to the war conditions it was not possible for owners to embark upon extensive repair schemes to houses, but vital repairs such as the weatherproofing of roofs, repairs to spoutings, drains and water closets have been carried out wherever necessary.

It was not necessary to institute legal proceedings for the abatement of any nuisance although in a few cases such proceedings were threatened before the work was carried out.

Some overcrowding exists in the town due to the war, and efforts were made to minimize this by housing exchange or by the re-billetting of evacuees. There was very little trouble with van dwellers, only four families being so housed. In one case a van dweller was evicted from a most unsuitable site.

There was no action during the year under the Housing Acts. We have a few houses subject to demolition orders which are still occupied, and some houses in clearance areas which are empty but not demolished.

Food Inspection: This work, especially meat inspection, was very onerous during the year. The animals slaughtered in the Borough were:

Cattle, 3,335; Sheep, 11,986; Calves, 448; Pigs, 886

All the carcases and offals were inspected at the slaughterhouses, and the numbers found to be tuberculosis were:

Cattle, 752; Pigs, 78; Calves, 6.

The total weight of the meat (carcases and organs) condemned at the slaughter-houses was 100,226 lbs.

Many visits were paid to foodshops, both to inspect the premises and the food. Only in very few cases was it necessary to make any adverse comment upon the condition of either the premises or the utensils. The traders, often in difficult circumstances, are doing their best to keep their premises in a hygenic condition.

The foods condemned at the shops are listed below. The usual cause of condemnation was decomposition.

Mixed tinned foods, 86; Rabbits, 130 lbs.; Eggs, 2,841; Cheese, 21 lbs.; Imported beef, 96 lbs.; Margarine, 26 lbs.; Butter, 3 lbs.; Lobsters, 20 lbs.; Bacon, 44 lbs.; Biscuits, 11 lbs.

Owing to the great pressure of other work the number of visits paid to cowsheds and dairies was less than usual. In my opinion there has been a serious decline in the standard of cleanliness on the farms, and the usual excuse is the labour shortage. While there is no doubt that the farmer's difficulties have greatly increased it is most unfortunate that the standard of milk hygiene should suffer.

During the year the Retford Co-operative Society, Ltd., decided to build a new dairy and to instal a larger plant for the pasteurisation of their milk. Work was commenced on the building but it was felt that some considerable delay would be caused in its completion by the war conditions.

Infectious Disease: Diphtheria was very troublesome during the year. The cases were visited and removed to hospital on the day of notification, and all the contacts were swabbed by the Medical Officer or Nurse. I was able to assist in advising the public to have their children immunised against diphtheria, and in one part of the town house-to-house visits were made urging upon parents the great necessity for this precaution. No other infectious disease caused any serious trouble although quite a number of visits were made to the homes of children infected with scabies.

Cleansing: This important work, together with salvage, was done satisfactorily throughout the year. An experiment with female labour was tried for the cleansing of streets without much success, and in the autumn we were pleased to be able to secure sufficient male labour (mostly over 60 years of age) to be able to dispense with the women on this work. It is not a suitable job for women in my opinion.

The collection and sorting of waste material for salvage became a most serious matter and during the year it was decided to form a Women's Salvage Committee to help with this work. This was done and the Committee then organised street salvage stewards throughout the town. The effect of this was to cause a most substantial increase in the flow of salvage. During the year the sales of salvage amounted to 290 tons, of which 142 tons were paper, and 81 tons were crushed tins or scrap iron.

The collection of house refuse was carried out weekly throughout the year, and the refuse was disposed of by burying in tips. No serious difficulty arose in this work although there was a substantial increase in the cost, largely due to the higher rate paid to the contractor who provided the team labour.

Summary of Visits.
